Sarborg Sells Cryptocurrency Trading Agent to Ebers Tech for $12.5 Million

Wilmington, DE, November 19, 2026: Sarborg Limited ("**Sarborg**"), the agentic AI and quantum computing signature intelligence business, today announced that it has agreed to sell its cryptocurrency trading agent to Ebers Tech Inc. ("**Ebers**"), a private Canadian company with more than 30 shareholders, for a total consideration of $12.5 million. The consideration will be satisfied by the issue of new shares in Ebers, giving Sarborg a shareholding of approximately 35.3% in Ebers following completion. Sarborg will also receive a royalty of 20% of all fees that Ebers receives.

Sarborg developed the cryptocurrency trading agent using its proprietary forecasting models, which generate directional trend calls on cryptocurrency markets over 24-hour and 7-day periods, each with an associated confidence score. The agent combines these forecasts with automated trading logic to place trades through a digital asset exchange. Across its testing, the model has achieved directional trend accuracy of between 60% and 80%. Over the past 30 days, the model called the direction correctly on 66.67% of its high-confidence predictions (above 60% confidence), across 18 predictions.

The agent is built on a range of proprietary weighting methodologies and inputs, all of which will transfer to Ebers on completion together with the underlying code, forecasting model, trading logic, model weights, training data and documentation. Ebers will not trade using the agent itself. Ebers will commercialise the agent by licensing it to appropriately regulated third parties in return for licence fees, on which Sarborg will receive its royalty. Sarborg will provide transitional support while Ebers prepares the agent for licensing.

Sarborg applies quantum computing and agentic signature intelligence across a growing range of sectors, including pharmaceuticals, agriculture, animal health and bacteriology. Financial markets do not form part of Sarborg's sector ambitions going forward, and the Board has therefore decided to sell the cryptocurrency trading agent to a dedicated owner. The transaction allows Sarborg to focus its resources on its core sectors, while retaining exposure to the future success of the agent through its shareholding in Ebers and its royalty on licence fees.

"We built the cryptocurrency trading agent to demonstrate how our forecasting and agentic models perform in fast-moving financial markets, and its results have been encouraging," said Dr. Andrew Regan, Chief Executive Officer of Sarborg. "Financial markets are not where we see Sarborg's future, so selling the agent to Ebers is the right outcome for both companies. Ebers gains a proven model with proprietary inputs, while Sarborg keeps a meaningful stake in its success through its shareholding and royalty, and can focus entirely on applying quantum computing and signature intelligence in our core sectors."

Disclaimer: Past performance of the cryptocurrency trading agent is not indicative of future results. Cryptocurrency markets are highly volatile, and actual results may differ materially from historical performance.

About Sarborg Limited

Sarborg is an agentic AI and quantum computing signature intelligence business, built on the principle that signatures can function as a universal data language to identify, interpret, and generate high-value opportunities across multiple sectors. By analysing, matching, and learning from biological, chemical, and industrial signatures using its agentic AI and quantum computing infrastructure, Sarborg's agents create a continuously evolving network of intelligence-driven insights.
